

# Downloading, Installing & Usage of FMWLauncher

FMWLauncher is a replacement to Java Web Start. Java Web Start was a built in Java feature used to launch Java applications.

**\*Important: Remove your previous FMW shortcuts, FMWLauncher will create new ones as shown below.**

[Download and Install FMWLauncher](#), once completed, you can visit the landing page for FMW, as per usual:

You will also notice a desktop shortcut which you can use to launch FMW from.
