

CITYWIDE ASSET COLLECTOR ⁺ ADD-ON

Accurate mobile data collection for better asset management

Asset Collector (AC) empowers your staff in the field with access to more information about their assets than ever before – improving asset management efficiency and performance.

This powerful mobile solution allows field staff to:

- View assets by GIS layers on map or grid view
- Mark new assets in the field
- Update asset attributes
- Enter condition assessments

RICH ASSET DATA MANAGEMENT

Users can access rich asset data in the field including attachments/ images, condition assessment records, asset attributes, and GIS information.

USER-FRIENDLY INTERFACE

The Asset Collector mobile application is simple to use in the field with both iOS and Android devices.

NO FIELD INTERNET CONNECTION NEEDED

Asset Collector functions without internet access to enable easy data collection in the field then sync with the CityWide suite when internet is available.

EASILY MANAGE PERMISSIONS

Administrators can adjust and limit Asset Collector user access to Asset Manager data and web application.

INTEGRATES SEAMLESSLY WITH ALL CITYWIDE MODULES

CityWide Asset Manager (AM) admins can approve an asset created in the Asset Collector app and add it to the asset inventory.

(MM)

Once a new asset has been created and approved, **Maintenance Manager** web-app users can issue work orders tagged to the new asset.

(GIS)

CityWide GIS enables users in the field to download and view assets directly through a map view.
